

CHEMSHARE

Moving beyond disposal

The problem

Often times chemicals are purchased and some are left unused or only partially used until placed into a bin for discard. In a large lab setting it's common for different working groups to order chemicals independently and seldom discuss their orders with other work groups. It's also common for these same work groups to have separate accumulation locations where they place their chemicals designated for discard. A lack of effective and collective chemical resource management can lead to high cost purchases and disposal charges.

Our Solution

Our Chemshare™ solution is designed to help you take a second look at what chemicals are going out and diverting from waste disposal to another lab if possible. You can also give back to the community by donating to local schools or education facility to use in their science programs. Chemshare™ can help you save on chemical procurement and hazardous waste disposal costs at the same time. And in some cases, can lower your generator status which will save more money and reduce regulatory burden. Not to mention Chemshare™ is a good way to please any auditor!

Redirection, Repurposing, & Recycling

This solution includes a customizable process that redirects chemicals placed in discard bins from disposal into use at another location that could use it. We'll partner with you and all your labs to consolidate and redistribute discards to where they can be used.

We're committed to your success!

We recognize that you have many choices when it comes to choosing a business partner to assist you in managing your hazardous waste. That's why we've worked hard to curate the right solutions to offer you the value that you're looking for while staying committed to sustainability.
